Lesson 2: Reproductive System

External male views

MALE GENITAL VARIATION

NOTE ABOUT THESE PICTURES AND THE ONES ON THE NEXT FEW PAGES: These illustrations do not represent all people's bodies, including people who have not yet reached puberty, people with certain disabilities, and some people who are intersex or transgender. Also, the shapes and sizes of people's bodies and body parts vary greatly from person to person.

Lesson 7: LGBT Youth

Last revised January 25, 2011

Discussion Questions or Writing Prompts

- 1. Based on real people you know (protecting their privacy by leaving out their names, of course) and given what you just heard, how do you think people know what their gender identity is? How do they know if they're supposed to be a boy or a girl?**
- 2. What about sexual orientation? How do people figure out if they are gay, lesbian, bisexual or straight?**
- 3. What myths or stereotypes about LGBT people did you used to believe that you're starting to realize aren't true?**
- 4. What could be done to make school a more positive place for the students telling these stories? What could you do to be more of an ally?**

High School

Lesson 9: Abstinence

Abstinence Visual

What makes it hard to abstain from sex?	What makes it easier to abstain from sex?
Challenges:	Suggestions:

Lesson 12a: HIV - Focus on Barriers

HIV & AIDS Review

1. People can have HIV (the germ that causes AIDS) without actually having AIDS.
2. People who have HIV can pass it to others, even if they don't feel sick.
3. There is a new cure for HIV.
4. Sex is the most common way HIV is passed from person to person.
5. You can get a shot (a vaccine) to protect you from HIV.
6. An 18-year old girl had unprotected sex with her boyfriend before she found out he used to inject drugs. Now she is pregnant. She should be concerned that she might have gotten HIV and that her baby could get it from her.
7. A 16-year old couple has been together for six months. They don't have oral, anal or vaginal intercourse, but they do touch one another's genitals and sometimes they have orgasms. They should be concerned about the possibility of getting HIV.

Condom Facts

FACTS:

- **Condoms reduce the spread of HIV.**
- **Latex condoms do NOT allow anything to pass through – not air, water, sperm, bacteria, or viruses, such as HIV.**

Actual research example:

- **There were 124 couples in a research study.**
- **In each couple, one person had HIV and the other person did not.**
- **The couples used condoms correctly every time they had sex for two years.**
- **At the end of the study, no one had passed HIV to their partner.**

Condom Variety

Condoms come in different **sizes**,
shapes, **thicknesses**, **materials**,
colors and **flavors**.

**All condoms sold in the
United States
meet safety standards.**

Dental Dams

Dental dams are sold in some clinics and drugstores.

A condom can also be used to make a dental dam.

Female Condoms

Lesson 12d: HIV - Focus on Communication

Condom Use among Students Who Have Had Sex (grades 9-12)

Between 1991 and 2009, the proportion of high school students who used a condom the last time they had sex increased from 46% to 61%.

HIV Tests among Students (grade 12 only)

19% of seniors in high school have been tested for HIV at least once.

Lesson 17:

Uncovering the Facts about Adoption, Abortion, and Teen Parenthood

Only about 1,000
children are adopted
each year in the
United States.

Most families who adopt children do so because they are infertile – that is, they cannot get pregnant.

Most adopted
children were
adopted when they
were babies.

If a woman chooses adoption for her baby, she needs to get written permission from the person she got pregnant with.

If someone decides to plan for an adoption, they can pick the family that adopts their baby, if they want to.

It is legal to buy
someone's baby, as
long as everyone
involved agrees to it.

Most abortions only take 5 or 10 minutes, even though the woman is usually in the clinic for 2 to 3 hours.

If a woman has an abortion, she is more likely to have a miscarriage later in life.

If a woman in
Washington State
can't afford to have
an abortion, she
can apply for
Medical Coupons,
which will pay for it.

If a woman wants to have an abortion, she needs to get written permission from the person she got pregnant with.

Most women end up waiting until pretty late in their pregnancy to have an abortion.

There is a pill you
can buy at the store
that makes you
have an abortion.

If a woman is pregnant and wants to give birth, her boyfriend or parents can legally make her have an abortion or adoption instead.

Most teenage women who are pregnant do not see the doctor as often as they should.

Three of the best things a woman can do to have a healthy pregnancy are to not smoke, not drink alcohol, and go to the doctor or midwife regularly.

The basic responsibilities of parenthood include providing children with food, shelter, clothing, healthcare, and education and protecting the children from abuse and neglect.

Becoming a parent
is the leading cause
of dropping out of
school among teen
girls.

Eight out of ten teen mothers do not marry the father of their first child.

However, these dads are still able to pay enough child support to help the mom and baby get by.
